Education

University of Central Florida — Orlando, FL
Bachelor of Science in Computer Science — *Aug. 2021 – Dec. 2024*

Experience

AI Software Engineer — Apr. 2026 – Present
University of Central Florida — *Orlando, FL*

- Assist in developing AI agents and assistants, including an ITSM agent that creates and manages ServiceNow tickets through MCP. These applications use containerized services, Azure API Management, and Portkey as an AI API gateway for security, observability, and traffic and network management.
- Use custom-built solutions and Azure resources, including Azure Load Testing, Log Analytics workspaces, Grafana, and other observability tools, to test, monitor, and troubleshoot development and production environments and deployments.
- Gain hands-on experience with the use cases, capabilities, and limitations of numerous AI platforms, including Microsoft 365 Copilot, Copilot Cowork, Copilot Studio, Azure AI Foundry, GitHub Copilot, and self-hosted models running on 32 NVIDIA H100 GPUs across four nodes in UCF's HPC clusters.
- Apply CI/CD and infrastructure-as-code practices with GitHub Actions, Terraform, and Bicep to automate builds, testing, and deployments, making development pipelines faster and more consistent.
- Serve as one of two owners of UCF's GitHub Enterprise, provisioning organizations for university employees and researchers and configuring billing and enterprise features such as GitHub Copilot.

Software Developer — May 2025 – Jan. 2026
FSEC Energy Research Center — *Cocoa, FL*

- Continuously developed features and bug fixes for **EnergyGaugeUSA**, a DOE-approved legacy building-energy simulation tool for residential code compliance and energy modeling.
- Designed and implemented a web app to calculate the carbon dioxide equivalent (CO_2e) of buildings, ensuring compliance with 2030 zero-carbon goals. Authored full end-user documentation.
- Developed an OCR-powered internal tool leveraging the Google Gemini API to automate verification of residential building images, reducing manual review time.

AI Platform Engineer — Mar. 2025 – May 2025
University of Central Florida — *Orlando, FL*

- Sole developer of an AI chat interface Proof of Concept (PoC) integrating multiple LLMs into a single, UCF-branded software application.
- Designed to provide UCF researchers, stakeholders, and all UCF-affiliated individuals, including students, with rapid, secure access to LLMs, as both the interface and conversation logs remain onsite in UCF's Azure subscription.
- Serves as a bridge between multiple external AI content providers and user interfaces.
- Managed a 5,000 USD budget, approved by the CIO of UCF IT in 2025, from an AI development and research fund.

Projects

UCF AI for Game Programming Competition | *Unity, C#, LLM-Driven Dialogue* — Jan. 2024 – Apr. 2024

- Created a 2D top-down adventure game (The Apartment) for "AI for Game Programming," winning **Best in Show**.
- Implemented time-loop puzzles and LLM-driven dialogue for a mystery narrative.
- Integrated pathfinding algorithms and advanced character interactions using Unity.

UCF Bioinformatics Research - Looking at Genomes Graphically | *Python, PyPI, React* — Jan. 2024 – Nov. 2024

- Developed a CLI-based Python package that generates images from large-scale DNA sequencing data for use in training machine-learning models.
- Built a React-based admin interface for test scheduling and result management.
- Integrated the package with a bioinformatics cluster to convert DNA sequencing data into images at scale.
- Authored full CLI documentation with examples and reproducibility guidance.

Purple.ai - FIU Hackathon Project | *AI Chatbot, LLMs* — Sep. 2023

- An AI chatbot website that unified numerous LLMs seamlessly into a single chat, giving the user the ability to switch LLMs mid-conversation as well as let the application scan the user's prompt to select the best-fitted LLM for the response.
- Designed routing logic for context-aware LLM switching mid-conversation.

Technical Skills

Programming Languages: Python, C, C++, C#, Java, HTML, CSS, JavaScript, PHP, Pascal
AI/ML: LLMs, AI Agents, MCP, Azure AI Foundry, Azure AI Services, Copilot Studio, GitHub Copilot, Portkey, Google Gemini API
Cloud/DevOps: Azure, Azure API Management, Entra ID, Kubernetes, Docker, Terraform, Bicep, GitHub Actions, CI/CD, Ansible, Linux, Azure Load Testing, Log Analytics, Grafana
Tools/Frameworks: React, Node.js, MongoDB, Unity, Anaconda, ServiceNow, Jira, Confluence
